Invacare® Reliant Mobile Hoists

Multi-functional mobile hoists

Invacare® **Mobile Hoists** feature 2 models; the **Reliant 150** and **Reliant 250**, with a maximum lifting capacity of 130 kg and 175 kg. These models have been designed for home, residential unit or hospital use and possess features which can address patient needs in terms of function, reliability, manoeuvrability and safety.

➤ **Safe and comfortable transfers**

The *Invacare® Reliant Mobile Hoists* ensure comfort and safety during the transfer of patients. The foot operated, angle adjustable base facilitates ease of access around a bed or wheelchair during the transfer process. A four point spreader bar is also available, which ensures transfer in an appropriate postural position for the individual user. The sling attachment allows the spreader bar to be used with most types of sling*. Transfers can be carried out by using a push button control to lift or lower a patient to the desired location, and the push handle affords ease of handling and control.

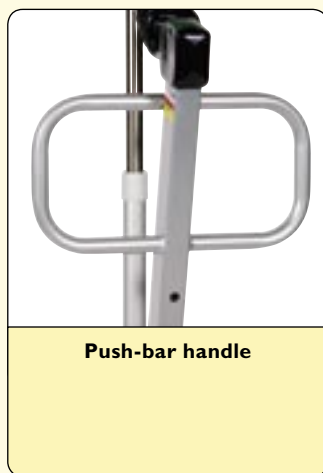

* Dependent on a documented risk assessment of the patient to be transferred

➤ **Added features**

For added patient and carer safety, both mobile hoists feature a number of emergency systems, such as an automatic stop function that stops the lift in the event of the lift boom coming into contact with an obstacle. Also an emergency stop button, an integrated manual switch and an emergency mechanical descent system, if the remote control should fail. A multi-castor base ensures both types of mobile hoist are easily manoeuvrable, even on a carpeted surface; with brakes on the rear castors. A compact folding system makes these mobile hoists easy to transport and store.
